

# A unified, *agentic* system for institutional investment management.

Reve is building the AI-native platform where allocation, risk, manager diligence, monitoring, reporting, and operations connect as one intelligent system — with agents that work alongside your team as analysts.

On that foundation, we deploy agents that research managers, stress-test portfolios, draft IC memos, monitor underlying holdings, and model look-through exposures — giving you a new level of visibility, insight, and efficiency across your portfolio, while your team remains in control of every decision. Our team has built investment platforms at **Addepar**, **Opto**, and **PDT Partners**; we know the domain, and we ship production-grade investment software.

## WHAT THE AGENTS DO

### Asset allocation & risk modeling

Capital market assumptions, factor models, portfolio optimization, scenario analysis, and cash flow and liquidity projections.

### Manager tracking & selection

Continuous manager tracking, investment due diligence, and manager selection based on your evaluation criteria.

### Continuous portfolio monitoring

Real-time performance and risk attribution, drift detection, and proactive rebalancing signals.

### Memos, reporting & research

Drafting IC memos and board materials, generating stakeholder reporting, and answering ad-hoc research requests on demand.

## DESIGN PARTNER ENGAGEMENT • 3–4 MONTHS

### We build agents around your hardest workflows — together.

We're partnering with a small number of allocators to design and implement agents against their hardest workflows. You bring your portfolio goals and the processes you want to improve; we bring the engineering and investment fluency to quickly turn them into real capabilities, with every agent shaped around your unique investment objectives and frameworks.

#### WEEKS 1–2

##### Discovery

Deep dive on your workflows, data, and systems. Identify the highest-leverage agents to build first.

#### WEEKS 3–8

##### Build

Design and ship agents against your priority workflows, integrated with your existing data and tools.

#### WEEKS 9–12

##### Deploy & validate

Agents run alongside your team on real work, refined continuously based on usage and feedback.

#### WEEKS 13–16

##### Expand

Extend to additional workflows and formalize potential ongoing partnership and roadmap.
